Good study results, better night’s sleep

Alice PDx Diagnostic System
Convenient for patients

**Portable testing made easy**
The Alice PDx is a portable, diagnostic recording device for Obstructive Sleep Apnea (OSA) screening, follow-up and diagnostic assessment of cardio-respiratory sleep disorders. This flexible and portable sleep system incorporates the advanced features required to meet today’s industry needs. The Alice PDx enables you to test your patients outside of the lab without compromising study results, helping you to avoid the costs associated with re-testing.

**Flexible**
The Alice PDx can be used in a sleep lab, alternative care site or a patient’s home. The device is convenient for patients who are uncomfortable with, or have limited access to, a lab facility.

The Alice PDx is field upgradeable, so as new features are added, firmware upgrades will be made available, without having to return your device for service. As updates become available, you will be able to access them via web downloading.

**User friendly**
The Alice PDx device interface is easy to use, easy to understand and informative. Color-coded labels, located around the perimeter of the device, indicate where to connect the various sensor leads. The display shows the patient only the sensors that need to be connected. The sensor information and indicators help your patients or medical staff to place the sensors correctly and reduce the need for re-testing due to application errors.

A helpful, color-coded, step-by-step diagram is included with the Alice PDx system to walk patients through the appropriate application process.

The Alice PDx is compact and can accommodate side sleepers. The wires have been specifically designed to minimize excess length to make it easier for patients to manage the wires.
Minimize re-testing
The Alice PDx incorporates our unique Good Study Indicator (GSI). The GSI is predicated on airflow and oximeter signal quality and displays the amount of “good quality data” needed for a study to be complete and valid. The indicator measures patient airflow, gathered by the nasal cannula and/or the oral thermistor, airflow from therapy devices, and pulse oximetry, gathered by the SpO2 sensor. Without either of these signals, the sleep study would be declared diagnostically invalid because of insufficient data.

Maximize study quality
The Good Study Indicator helps to eliminate the frustration of receiving insufficient study data and the inconvenience and effort involved in rescheduling patients for a repeat study. The GSI visually displays the amount of good quality data in 25-percent increments on the Alice PDx display screen. This information allows the clinician to decide if the patient needs to repeat the study. If the study needs to be repeated, the provider can educate the patient remotely on how to apply the sensors better.

Patent pending.
Sensor cables transmit the appropriate signals to the Alice PDx. The signals are stored on the removable memory card, or if configured to do so, the signals can be displayed from the Alice PDx on a computer running the Alice Sleepware software application.

The base configuration channel set supports testing requirements for levels three and four and includes:

- Nasal pressure cannula
- Oral thermistor
- zRIP abdominal and chest belts
- $\text{SpO}_2$
- Body position

In addition to the basic channel set indicators, there are also indicators for the optional ECG and ExG yokes and the optional therapy interface.

**Battery indicator**
Indicates power level.

**Memory card indicator**
Provides estimated memory capacity.

**Device error indicator**
Indicates the need for service.

**Status indicator**
Displays green to indicate proper operation or yellow for operation error (i.e., disconnected sensor).
Connecting the Alice PDx to a therapy device
The Alice PDx interfaces with, and supports certain therapy devices with serial or SmartCard connections. When using the Alice PDx, a provider can specify which treatment data to capture along with the appropriate diagnostic channel data. Depending on the Alice PDx configuration selected, it will record up to eight channels such as:
- Patient airflow
- Pressure
- Leak
- Tidal volume
- Event flags (from auto-titrating devices)

This data allows the provider to confirm the therapeutic benefit of the prescribed therapy device for the patient. Once connected to the therapy device, the Alice PDx will record data from the device during the sleep study. Using the pressure cannula port, the Alice PDx can be connected to other therapy devices; however, more limited patient airflow and pressure data will be collected.

Connecting a memory card reader to a computer
After recording, the memory card is removed from the Alice PDx and placed into the provided “plug-and-play” SD card reader. The patient’s data is then imported from the SD card to a computer for quick review and analysis with proven Alice Sleepware.

Optional ECG and ExG yokes
The Alice PDx can be interfaced to optional ECG and ExG sensor interface yokes. The ECG yoke consists of five electrode inputs, considered in cardiology to be a three-lead ECG. This provides three measured and four derived ECG channels. The Alice PDx optional ECG yoke can provide one-, six- and seven-channel configurations.

The optional ExG yoke provides 13 inputs to provide four EEG/EOG channels and three EMG channels, including ground and references. This enables sleep scoring.

Multi-night recordings
With the SD card memory and two- to three-night battery life, the Alice PDx can collect information from multi-night recordings when needed. The Alice PDx can be set to start and stop recording automatically to minimize the risk of the patient forgetting to set it.
The Alice PDx system is provided with our proven Sleepware software, which has accommodated our Alice in-lab diagnostic systems for years. Sleepware can display live or pre-recorded data in a resolution consistent with your computer hardware specifications. As the need for your lab operation services changes or grows, Sleepware can accommodate your equipment software needs.

- Sleepware provides a single software application for lab and portable testing.
- A single software application helps to avoid confusion and additional training needed for adapting to multiple device-specific software.
- Sleepware allows you to manage your data across larger networks and remote locations, enabling you to perform remote scoring or data access.

- Sleepware software is a computerized process of analyzing polysomnographic data in order to aid a qualified healthcare provider in diagnosing sleep disorders. The Alice PDx device is not intended to replace a qualified healthcare provider or his/her interpretation of data.

Other diagnostic products and tools available

**In-lab sleep system**
For in-lab system to cover your needs for full-featured PSG capabilities, we offer the Alice 5 in-sleep system. The Alice 5 full-featured PSG system records, displays and prints physiological information. It offers standard functions expected in today’s high-end evaluation platforms, accommodates facility expansion and supports greater analysis.

**Sensors and accessories**
We offer a complete line of sensors and accessories including Pro-Tech sensors, zRIP effort technology, PTAF Pressure Flow, electrodes, oximeter sensors and probes. Our sensors help you meet AASM standards.

**Leading the way in sleep diagnostics**
Well known for innovation in advanced sleep therapy systems and technologies, we also equip sleep technicians with a full range of products and support to handle their patient monitoring needs in or out of the lab. With in-home screening and portable and full-featured PSG diagnostic devices, a dedicated sales force and 24/7 technical specialists, we are committed to helping sleep professionals lead the way in facilitating an appropriate diagnosis and healthy night’s sleep for patients.

**Patient and clinician training tools**
- A video (on DVD) that guides the patient through how to use the PDx and correctly apply the sensors.
- A CD-ROM that guides the clinician through how to configure the Alice PDx and score the data.

Part number information for these training tools is listed under the Ordering Information section of this brochure.
The basic Alice PDx system includes:
- Alice PDx device
- Alice PDx professional and user guides
- Carrying case
- Patient setup carrying case overlay
- Serial USB Alice PDx to PC communication cable
- 1 GB SD card
- Alice PDx holster (chest holder for device)
- Neck lanyard for Alice PDx holster
- 2 ea. Pro-Tech zRIP effort belts with wireset
- 5-pack starter pack pressure cannulas
- Oral thermal sensor
- Nonin SpO₂ sensor extension cable
- 4 ea. AA batteries (packaged separately)
- Choice of Nonin SpO₂ probe (packaged separately)

Basic PC recommendations:
- Windows®-compatible personal computer running Windows Vista Business, Windows XP Professional or 2000 with a CD-RW drive. A DVD drive is recommended if you will be saving audio/video files onto removable storage media.
- Intel® Pentium® 3 processor (500 MHz) or greater, 32-bit (x86) processor (1 GHz) required for Windows Vista computers
- 512 MB system memory, 1 GB or higher for Windows Vista computers

Specifications:
- Total channels: Up to 21 with optional ECG and ExG yokes
- Base channels: 10 channels: pressure-based flow (w/snore) and thermal airflow, zRIP effort (2), body position, SpO₂ (also pleth and pulse rate) and patient marker. Up to eight parameters from Respironics therapy devices may be acquired, including pressure, flow and leak.
  - Optional yokes/ExG yoke: 7 channels: 3 measured and 4 derived channels
  - Input impedance: ECG: 10MΩ per electrode 20MΩ differential
    EEG: 2MΩ per electrode 4MΩ differential
    EMG: 2MΩ per Electrode 4MΩ differential
  - Bandwidth: ECG: 0.318Hz to 81Hz
    EEG: 0.318Hz to 35Hz
    EMG: 9.7Hz to 86Hz
  - Input signal range: ECG: +/- 4mV
    EEG: +/- 500uV
    EEG: +/- 150uV
  - Digital resolution: Up to 16 bits
  - Initial sample rate: Up to 1,000 Hz
  - Max storage rate: 200 Hz for ECG/ExG, 100 Hz for effort and thermal flow, pressure flow 200 Hz, snore 500 Hz, body position 1 Hz
  - Communication interfaces: Serial protocol USB PC cable, SleepLink and serial communication cables for Respironics therapy devices

System physical characteristics:
- Alice PDx unit:
  - Size: 5” L x 3” W x 2” H (12.7 cm x 7.62 cm x 5.08 cm)
  - Weight: approximately 8 oz (230 grams), (weight does not include batteries)
  - System power: Three AA (1.5V) alkaline batteries, 0.43 watts (typical)
  - Requirements: Alice PDx can support the use of rechargeable batteries.
