Washer disinfectors
Small - Medium range
Steelco continues to grow and enhance its international reputation in healthcare through its strategy of investment in product development.

This small-medium range of washer disinfectors is at the forefront of the latest research and technology, resulting in consistently tested and efficient washing performance. Our approved products are designed to satisfy all customer expectations thus ensuring a strong platform to promote further business opportunities.

Standard compliant

Steelco Washer-Disinfectors are designed and constructed to comply with the latest European and UK guidelines on decontamination. EN ISO 15883-1/2, CEN ISO/TS 15883-5 and HTM 2030

Steelco Washer-Disinfectors are classified CE Medical Device (Community rule 93/42/CEE) code nr. 0051.
Constant improvements and innovations lead Steelco products to run economically and reach a higher level of environment compatibility.

Machines baskets, inserts and accessories

“the range offers to customers a large choice of machines, baskets and inserts all specifically designed to meet different end user needs”

Other medical range Steelco products:
- DS 610/1
- DS 610/2
  - Fast Cycle version
  - 10 DIN 1/1 trays washer disinfectors
- DS 610/1 SL sliding door
- DS 610/2 SL sliding door
  - Fast Cycle version
  - 10 DIN 1/1 trays washer disinfectors
- ID 300
  - Instrument drying cabinet
- AD 400
  - Instrument, anaesthesia bags and hanging hoses mixed drying cabinet
- BD 500
  - Warming cabinet for blankets
Cleaning effectiveness

The Mechanical action is one of the main element for the cleaning effectiveness of the washing process, Steelco has studied different washing pumps, following each model washing circuit that ensure high flow rate combined with effective spray pressure.

According to internal procedures, an ultrasonic cleaning unit can be used as an alternative support to the manual cleaning to remove biological debris in the most intricate shapes and cavities before the washing disinfection process.

Ultrasonic cleaning acts on immersed surfaces thousands times a second to insure perfect cleanliness even on the most intricate shapes. Ultrasonic cleaning is safe for the most delicate and highly finished objects since there are no abrasives or harsh chemicals used and does not create scratches which would create cleaning problems later.

Steelco ultrasonic cleaners are available in several versions, all featuring automatic tank filling and water control level with water recirculation through luer lock connections for hollow instruments during the cycle.
Thermodisinfection and drying capabilities

Thermodisinfection is the recommended and most efficient method for the disinfection of reusable medical devices. European guidelines strongly recommend thermodisinfection to be applied whenever it is possible. To grant the best results, Steelco washer disinfectors are also equipped with efficient hot air drying systems that facilitates the total elimination of remaining water both inside and outside the instruments.

Thermodisinfection is achieved by gaining a temperature up to 93°C and its holding for a programmable period, for each single cycle, in order to comply with any legal provisions regarding thermodisinfection among different countries.

Every detail of washing and drying circuits has been optimised for the best performances. Process valves, piping and blowers are designed for the least possible resistance in the system and to increase the water and the air flow into the chamber and through the carts.

Washers key features

- Up to four liquid dispensing systems for detergent dosing.
- Three water connections are available: cold, warm and DI water. Between each washing and disinfection phase water is drained and clean water is introduced for the next phase. Boiler or tanks for pre-heating of DI water option are available. Triple water filtering system grants to capture all the residue so that it is not recirculated and thus saving the pump life.
- Double wall construction and high quality insulation reduce electricity consumption and heat loss.
- High flow capacity built-in water softening systems for a continuous supply of softened water.
- Water purification systems for DI water supply are available.
Control system

Steelcotronic Control System, with its auto-diagnostic checking, constantly monitors and displays current cycle status and alarms. It allows the user to optimise the washing process and to personalize the programmes on the machine.

The ease in using the touch control system, thanks also to the graphic colour LCD display, simplifies the end user job when operating the machine. The glass panel guarantees the operator a better protection against any contamination when selecting the cycle type.

A USB port is available for the download of historical cycle data download and for easy software upgrades. USB port allows an easy paperless document flow. Documents can be opened directly by common office applications.

Print reports and historical cycle data

During every washing cycle, the machine software generates a report that can be printed or stored on a USB memory key, or transferred to a PC connected via Ethernet or RS232 port.

All critical parameters are registered, in particular:
- machine model and number, operator identity
- cycle starting/ending date and time, status at the end of the washing cycle
- executed Ao values
- programmed and executed water and chemical consumption
- temperatures measured by nr. 2 independent monitoring probes during each cycle phase
The Fast Cycle concept

Steelco follows the more and more growing Customer demand for washer disinfectors which can combine high standard cleaning and drying results with working efficiency and very short cycle time.

Save time and save energy

**35 Min. Cycle Time**

Fast Cycle concept

"combines the energy saving concept with a high standard of cleaning and drying performance in a very short cycle time"

Thanks to the experience we Steelco has with the manufacturing of our DS 1000 3S and DS 800 3S CSSD models for which a standard cleaning, disinfecting and drying cycle time has been reduced up to 30 minutes, Steelco has now developed new fast cycle machines for the middle size washer disinfectors range.

DS 610 SL (sliding down door) and DS 610 (hinged door) machines have been developed in Fast Cycle configuration to achieve effective washing and drying results in a 35 minutes cycle time.

Focused on the environmentally consciousness theme Steelco has greatly improved working efficiency with the reduction of energy consumption due to cycle time reduction and thermal insulation.

2S standard fast cycle

The pre heated 60 °C hot water washing tank (1) allows to reduce washing process time and consequently the total cycle time. Saving heating time in the washing chamber, avoids washing chamber to cool down thus reducing energy loss. While the machine is performing the washing phase, the washing tank (1) is filled with rinsing water and pre heated to 60 °C.

The pre heated 85 °C demineralized water tank (2) allows to radically reduce thermodisinfection process time and consequently the total cycle time.

A further step in energy and time saving can be achieved by an optional highly efficient heat exchanger that recovers washing and rinsing drain hot water energy to pre heat DI water.

Steelco offers a complete accessories range: transport trolleys, wash carts, inserts, trays, complements
A fully automatic washer disinfector with motorized vertical sliding down door available in single or double door pass-through version, standard or fast cycle concept version.
The large capacity of this model assures consistently tested and efficient washing-disinfecting performances and can meet at the same time high reprocessing needs of a TSSU/CSSD solution.

Fast Cycle concept - 35 min. cycle time
“combines the energy saving concept with a high standard of cleaning and drying performance in a very short cycle time”

Filtered forced hot air drying system ensures perfect drying of all instruments and tubes after disinfection thanks to an efficient distribution of air on all chamber parts and wash cart levels.

All loading and unloading operations can be done by using manual transfer trolleys or automatic single loading/unloading conveyors.

Washing chamber
Chamber volume ~250 lt / 66.04 Gal US
Basket volume ~220 lt / 58.12 Gal US

Sliding down door
Sliding down door allows a reduced machine encumbrance and is ideal in every reprocessing area also when the space is very limited.
The full HST glass motorized door provides the end user with a complete visual inspection during washing cycle.
DS 610/1 SL - DS 610/2 SL - Key features

- High safety and easy to use soft touch control system on glass panel with LCD colour display to visualize cycle status.
- 20 standard pre-programmed cycles available and 20 additional cycles available for customization.
- RS 232 port for printer connection to monitor/validate the washing phases.
- Motorized sliding down glass door made of double HST tempered glass.
- Ergonomic design of the door level height allows convenient loading and unloading operations.
- An efficient filtered forced air drying system with adjustable time and temperature setting, helps to ensure the complete inside and outside drying of all the surgical instruments and tubes.
- Washing and DI disinfection temperature are fully adjustable up to 93°C. Temperature is monitored by two independent sensors.
- Machine can be equipped with a steam condenser to prevent vapours from entering into the washing area.
- Heavy washing pump ensure high water flow rate combined with effective spray pressure.
- Washing/drying injection system on the same circuit.
- Inner cabinet, washing arms and tank filters entirely made of high quality AISI 316L stainless steel. Frame and body of machine made of AISI 304 stainless steel.
- Triple water filtering system ensures to capture residue, preventing re-circulation of contaminated material.
- Two standard automatic liquid dispensers provided with level control.
- Large storage on the basement to allocate up to four 5 lt (1.32 Gal US) chemical containers.

Optional
- 3rd and 4th Chemical dosing pump
- Light inside chamber
- Analogic sensor on washing circuit for pressure check (registered data)
- Steam condenser (total machine height 2390mm/94.09")
- HEPA H14 air filter
- Sump steam heating
- Drain water heat exchanger (Fast Cycle version only)
- Water softener (not for Fast Cycle version)
- Integrated printer ST2
- Basket recognition system
- 1S or 2S Fast Cycle versions
- Additional chemical dosing monitoring (flow meters)
- USB port
- Ethernet connection
- Conductivity sensor

DS 610 is a high capacity model, frontal loading or pass-through washer disinfector available in standard or fast cycle concept version. All loading-unloading operations can be carried out by using manual transfer trolleys.

Fast Cycle concept - 35 min. cycle time
"combines the energy saving concept with a high standard of cleaning and drying performance in a very short cycle time"

Filtered forced hot air drying system ensures perfect drying of all instruments and tubes after disinfection thanks to an efficient distribution of air on all chamber parts and wash cart levels.

Steelco DS 610 SL, DS 610 and DS 600 in double door version are suitable for reducing cross contamination through the separation of dirty areas from the clean ones.

Pass-through application
With DS 610 machines a higher productivity can be achieved with the optional Fast Cycle configuration.

Stands and side cabinets

Different models of 300mm/11.81" wide side cabinets allow to hold:
- Boiler for DI water pre-heating (cabinet and washer disinfecter are manufactured as a single 900 mm wide unit).
- Purification system for DI water supply.
- Up to four 5 lt. 1.32 Gal US chemical containers.

Stands improve ergonomics when machine is not installed under counter. The 600mm/23.62" height stands are equipped with doors for easy storage access to chemicals and accessories.

Stand is recommended when the machine is equipped with the option of boiler to pre heat DI water and the needed booster pump.
DS 500 SC - Underbench washer disinfector

Steelco DS 50 DRS range is an efficient aid for the cleaning, thermal disinfection and forced hot air drying of all types of dental and surgical instruments. Manufactured to allow an easy installation onto a bench top, it grants a fast and effective treatment of surgical instruments and utensils excluding the professional risk due to handling infected instruments. The DS 50 HDRS model is dedicated to stand alone installation and can be easily built as under bench into existing furniture. All the models provide a practical and safe solution for chemical storage.

**Chemical storage**

On DS 50 DRS and DS 50/2 DRS models, chemical tanks are integrated in the front panel and provided with quantity inspection window.

On DS 50 HDRS model, the large storage on bottom basement allows to allocate up to two 5 lt (1.32 Gal US) chemical containers.

**Steelco DS 50 DRS range washer disinfectors are designed to comply with the European EN ISO 15883 and UK HTM 2030 guidelines on decontamination and are classified CE medical device (Community Rule 93/42/CEE).**
- High safety and easy to use soft touch control system on glass panel with LCD colour display to visualize cycle status.
- 20 standard pre-programmed cycles available and 20 additional cycles available for customization.
- USB port for historical cycle data download and software upgrades.
- RS 232 port for printer connection to monitor and validate washing phases.
- High visibility full glass door.
- Filtered forced air drying system with adjustable time and temperature settings, helps to ensure the complete inside and outside drying of all the surgical instruments and tubes.

Optional
- DI water connection
- 2nd Chemical dosing pump
- HEPA H14 air filter
- External printer ST1
- Water softner
- Ethernet connection

Dimensions and connections

Standard electrical connection (International) 230V~/~/50Hz
Optional electrical connection (North America)* 220V~/~/60Hz
Power 2750 W 150 W
Pump power
Noise 52 dB(A)
Permitted room temperature +5°C/41°F - +40°C/104°F
Dryer blower up to 100 m³/h - 3531 ft³/h
Dryer heating 750 W

*other electrical connections also available as optional

Integrated USB port

A USB port integrated on the front panel is a standard feature on this model allowing the operator easy historical cycle data transfer from the machine to PC.

Ethernet connection is available as option.
Steelco DS 50 washer disinfector is designed and constructed to comply with the European EN ISO 15883 guidelines on contamination. It is a classified CE medical device (Community Rule 93/42/CEE).

Steelco DS 50 is an efficient aid for the cleaning and thermal disinfection of all types of dental and surgical instruments. Designed for easy installation onto a bench top, allows the operator easy loading of the material and the selection of the cycle. Everything else - pre-wash, wash and thermal disinfection - is provided by the machine. At the end of the cycle all the instruments are ready for sterilization without any further handling.

Integrated automatic liquid dispenser

The machine is configured with a built-in automatic liquid dispenser for detergent. A second automatic liquid dispenser normally used for rinse aid chemical is available as option. Liquid chemical levels are controlled by a pressure switch.

Washing chamber

Chamber volume ~60 lt / 15.85 Gal US
Basket volume ~50 lt / 13.20 Gal US

A complete accessories range: baskets, inserts, trays
- Steelcrotomic control system with LED display, 3 pre-setted washing programs for dental and surgical instruments.
- RS 232 port for printer connection to monitor and validate washing phases.
- The built-in water softener, optional, provides optimal cleaning effectiveness
- Washing and Disinfection temperatures are fully adjustable up to 93°C.

Temperature is monitored by two independent sensors.
- Standard steam condenser eliminates vapours from entering the washing area.
- Heavy washing pump ensures high flow rate combined with effective spray pressure.
- Inner cabinet, washing arms and tank filters made of high quality AISI 316L stainless steel.
- Triple water filtering system captures residue preventing re-circulation and extending the pump life.
- A built-in automatic liquid dispenser is standard. One more built-in dispenser is available as option.

**Optional**

- DI water connection
- 2nd Chemical dosing pump
- External printer ST1
- Water softner

**W 100 - Reverse osmosis water purification system**

The W100 is a very compact reverse osmosis device which is perfect to combine with small medium range washer disinfectors. The system is supplied by drinking tap water and, with its filtration system, pressure pump and osmosis membrane, it feeds a 35lt. (9.25 Gal US) gal tank with osmotic water.

Osmotic water tank is equipped with a level control system and automatically refilled.

**Dimensions:**

WxDxH  200+200 x 600 x 615mm (7.87"+7.87 x 23.62" x 24.21"

**Osmotic water flow:** 100 lt/h (26.41 Gal US/h) at 20°C (68°F) with 500 ppm salinity NaCl ca.

(lower temperature and higher salinity cause a reduction of the osmotic water production)
Drying cabinets

Steelco drying cabinets are available in several configurations from full width shelves dedicated to instruments, equipment and general items to mixed solutions for anaesthesia items and instruments. Blanket warming version available as well.

Cabinets are available in single door or double door pass through versions with glass doors for a rapid visual inspection of the stored items.

**ID 300**
Instrument drying cabinet
- capacity up to nr. 18 DIN 1/1 trays on 9 removable shelves, supplied with nr. 8 shelves.

**AD 400**
Instrument, anaesthesia bags and hanging hoses mixed drying cabinet
Composition
- up to nr. 3 AN cassettes for a total capacity of 36 anaesthesia hoses
- up to nr. 9 DIN 1/1 trays capacity on 9 removable shelves or
- up to nr. 18 anaesthesia bags capacity
- up to nr. 9 DIN 1/1 trays capacity on 9 removable shelves
Supplied with nr. 8 shelves and nr. 3 AN cassettes.

**Separate drying** of anesthetic and instrument accessories increases the throughput capacity of a washer disinfector of a third. Drying cabinets can accept a load volume of more than 2 units of washer disinfectors.

**BD 500**
Blankets warming cabinet
- 4 removable shelves for blankets (standard). Shelves can be added and adjusted for different sizes of load.

Steelco drying cabinets are available in several configurations from full width shelves dedicated to instruments, equipment and general items to mixed solutions for anaesthesia items and instruments. Blanket warming version available as well.

Cabinets are available in single door or double door pass through versions with glass doors for a rapid visual inspection of the stored items.
Lockable doors are reversible and configurable right or left opening also during installation.
Double door pass through version available.

General key features

- Insulated double walled AISI 304 stainless steel construction that grants the exterior surface temperature does not exceed 49°C (120°F). Temperature of tempered glass door does not exceed 49°C (120°F).
- Visual “open door” indicator. Lockable door.
- LED display, programmable for °C and °F, provides control and heater-on information for easy serviceability, temperature and time settings are control password protected to prevent unauthorized changes.
- Drying temperature settable from ambient to 80°C (176°F). Temperature alarms is disabled when door is open and for the time required to re-equilibrate temperatures in cabinet after door is closed. Temperature setting from 1 up to 999 min or continuous. Once the selected temperature is attained, it will be controlled throughout within 5.5°C (10°F) of the selected temperature. Overheat protection will shut the heater off with audible alarm for operator.
- Indirect UV air treatment during the whole cycle. Optional.
- Drying circuit with double fan combined with fast connectors (optional).
- Flashing air flow visual alarm indicators if either drying circuit fails.
- Air flow alarm with re-settable audible alarm, (flashing alarm indication remains until the air flow is restored).
- HEPA filtration on drying circuit. Monitoring for HEPA filter and indicator on panel advising when replacement is required.
- Control components positioned in top front position for convenient service access. Easy removal of fans, heater elements and control boards.

Optional

- nr. 8 or 9 air fast connections
- extra shelves with rails
- UV air treatment
- Humidity sensor
- ST2 printer

This Ultrasonic Cleaning System is focused on the treatment of reusable medical devices and rigid endoscopes. It combines a stainless steel cleaning tank with industrial style transducers and a powerful ultrasonic generator to provide the strongest tabletop cleaning available. It gives the speed and effectiveness of ultrasonic cleaning power with the convenience of plug-in-anywhere operation.

A DIN tray basket support and cover are included in the base unit. It meets CSA and UL requirements. Critical process parameters such as temperature, ultrasonic power and time are monitored granting the compliance to the international standards and can be recorded.

Pneumatic lift of the baskets provided with security device. The baskets automatically sink by pressing cycle start and are automatically lifted at the end of the cycle (no physical operation is required). A manual operating version is also available.

Water recirculation through luer lock connections during the cycle - nr. 2 luer lock connections for each level

Under bench storage for chemical canisters

US 100 - US 200 - Key features

- Washing tank made of stainless steel AISI 316L.
- External body made of stainless steel AISI 304.
- LED display and timer for cycle control.
- Automatic tank filling and water control level.
- Pump for automatic chemical dosing.
- Automatic minimum level of chemical control with alarm.
- Ultrasonic power 3000W with filter for radio frequency interference and power control from 0 to 100% included.
- Operation frequency modulation to avoid neutralization areas of the ultrasound effect.
- Standard Ultrasonic frequency 38 kHz, other frequencies on request.
- US 200/3 rinsing tank is provided with water spray nozzles and Luer Lock connections for water circulation.
