VBM Quicktrach Crichothyrotomy Devices
Pre-assembled and available immediately for use in the management of emergency airways.

Design a single step procedure to allow you to secure a patent airway in the quickest time possible.

VBM Surgicric Crichothyrotomy Sets
Pre-assembled and available immediately for use in the management of predicted difficult intubations.

Three ready-to-use crichtothyrotomy sets to secure the airway in “cannot-intubate-cannot-ventilate” situations:

- Surgicric I – for Seldinger technique
- Surgicric II
- Surgicric III – for rapid four-step technique

VBM Surgicric Cricothyrotomy Sets

Suction Equipment
- Battery suction
- Electric suction
- Diapnoe suction
- High quality

VBM Manujet Trans Tracheal Ventilator

Designed for optimization of the suction procedure.

- One-way irrigation port and MDI port
- Adult and paediatric sizes
- Options

VBM Cuff Pressure Gauges

High quality
- Pipeline suction
- Electric suction
- Battery suction

VBM Stylets, Bougies and Introducers

- Soft, atraumatic, preformed tip
- Malleable segment for optimal manoeuvrability. Indication marks for easy adjustments.
- Oxygen support.

VBM 5-Guide

Revolutionary new intubation guide – combines the benefits of stylets and introducers in one device for optimal airway management.

- Hollow lumen to enable oxygenation
- Indications for optimal manoeuvrability. Indication marks for easy adjustments.
- Soft, atraumatic, perforated tip

VBM Manual Transt. Tracheal Ventilator

Emergency use:
- Used in “cannot-intubate-can’t ventilate” situations, for oxygenation
- Easy to use, applied in seconds
- Comfortable with ET tube from bore – line
- Suitable for both adult and paediatric patients

VBM Stylets, Bougies and Introducers

Large, comprehensive range of Stylets, Bougies, Introducers and Exchange Catheters to cover all intubation assist roles.

Lost high, fully certified, comprehensive range
- Low weight, minimal dead space, high filtration efficacies
- Comprehensive range of configurations
- Bacterial & viral filters

VBM S-Guide

- Laryngotracheal anaesthesia cannula to facilitate atomization of topical anaesthetics throughout the tracheal area
- Type of anaesthesia limits the regurgitation reflex and ensures unique comfort for the patient as well as the practitioner.

VBM Stylets, Bougies and Introducers

Flexible stylets for assisted fibreoptic intubation
- Standard
- Left bend
- Right bend
- Trumpet type with ET tube adapter
- Soft design to minimize airway trauma

VBM Stylets, Bougies and Introducers

- Endotracheal intubation
- Nasopharyngeal intubation
- Oropharyngeal intubation

AIRWAY MANAGEMENT ACCESSORIES

CUFF PRESSURE GAUGES

- Range of adult and paediatric endotracheal mask and transglottic airway pressure monitoring devices

- Designed to help you ensure safe and optimal cuff pressure management for the best clinical results.

AIRWAY MANAGEMENT ACCESSORIES

VBM Quicclick Cricothyrotomy Devices

- Pre-assembled and available immediately for use in the management of emergency airways.
- Designed for a one-step procedure to allow you to secure a patent airway in the quickest time possible.

Suction Equipment
- Battery suction
- Electric suction
- Diapnoe suction
- High quality

Oropharyngeal Airways
- 13, 14 and 16 gauge jet-ventilation catheters available

Oropharyngeal Airways
- Guedel-style
- Full customisation available

- Advanced neonatal configurations
- Smooth bore, corrugated and extendible material

- Red safety caps
- Optional bronchoscopy adaptors
- Optional swivel adaptors

- Oxygen Therapy
- Nasal cannulae
- Nebulizer masks
- Bacterial & viral filters

- Nasopharyngeal Airways
- Bacterial & viral filters
- HME bacterial viral filters

- Oxygen Therapy
- Nasal cannulae
- Nebulizer masks
- Bacterial & viral filters

Airway Management Accessories

- Oxygen Therapy
- Nasal cannulae
- Nebulizer masks
- Bacterial & viral filters

Airway Management Portfolio

SSEM Mthembu Medical supplies an extensive range of quality electro-medical devices and medical consumables throughout Southern Africa.

We offer a comprehensive range of airway management products designed for optimal performance in the management of routine and difficult airways.

All products within our airway management portfolio embrace the philosophy of best practice and first pass success.

Included in our portfolio are:

- Visualisation Devices
- Supraglottic and Endotracheal Airways
- Airway Management and Intubation Assist Devices
- Respiratory Consumables

Airway Management Portfolio

SSEM Mthembu Medical supplies an extensive range of quality electro-medical devices and medical consumables throughout Southern Africa.

We offer a comprehensive range of airway management products designed for optimal performance in the management of routine and difficult airways.

All products within our airway management portfolio embrace the philosophy of best practice and first pass success.

Included in our portfolio are:

- Visualisation Devices
- Supraglottic and Endotracheal Airways
- Airway Management and Intubation Assist Devices
- Respiratory Consumables
Glidescope® Titanium Reusable.

Innovative construction and blade design help you rapidly intubate more patients in multiple settings. These new titanium profiles are lightweight and streamlined, offering improved maneuverability and working space for routine and difficult intubations.

The LT6 and LT5 combine the performance of the patented angled Glidescope blade with the strength of titanium.

The LTAC 75 and LT4 provide the comfort of a Mac blade with the confidence of a Glidescope.

Incorporating an advanced 4k digital camera with an integrated LED light source and Reveal™ anti-fog technology, for full colour digital video with real time viewing and recording.

Glidescope® Titanium Spectrum

Single-use System

Lightweight, Streamlined Disposable Blades

Single-use video laryngoscopy, combining self-dilating now profile blades with the latest advancements in lighting and camera technology. With the Spectrum system, six blade sizes enable quick intubations across a wide range of patient types, weight ranges (5kg to 160kg) to obese, and adult, and clinical settings.

The lightweight blade design of the Spectrum blade will offer the flexibility and robustness of a Carbon Steel blade with the reliability of a disposable blade.

Ambu® VivaSight™

Advanced Video Laryngoscope

Ambu® VivaSight™ offers unparalleled visibility of the anatomy with its innovative design and advanced technology.

- Advanced video laryngoscopy for small patients for whom video laryngoscopy has never been more clear.
- Fast single-use size options for children from preterm to 28kg (size 3, 4, and 5).
- Autoclavable and reusable at a lower intracuff pressure.
- Preserves ET lumen size, ensuring maximum sealing performance.

VBM’s 3rd generation supraglottic devices are lightweight, streamlined and effective and the continuous visual monitoring of the anatomy can be suctioned.

ET Tubes

High-quality ET tubes, including esophagus-stretching, cuffless ET tubes for intubation in difficult airways and high-volume ventilation. ET tubes designed to minimize airway trauma and optimize insertion ease.

FlexTip ET Tubes

Parker Medical offer a comprehensive range of ET tubes and accessories that are designed to minimize airway trauma and simplify ease of insertion.

- FlexTip ET - for naso-pharyngeal intubation

- FlexTip ET with an adjustable tip - for oro-pharyngeal intubation

- FlexTip ET with an adjustable tip - for naso-pharyngeal intubation

- FlexTip ET - for intubation in difficult airways

The Flex-it Directional stylet is an isometric profile, with a graduated stylet tip to facilitate quick and accurate intubation. The Flex-it Stylet is designed to be an adjustable stylet that requires no pre-bending. Due to its isometric design and adjustable tip, it allows surgeons to be remotely controlled and facilitates quick and accurate intubation.

Available in 4 sizes to accommodate standard and paediatric ET tubes.

Laryngeal Masks

Since the Aura Deco launch in 2004, the Ambu® Laryngeal Mask Airway (LMA) have achieved widespread acceptance in a variety of clinical cases performed to date. The Aura concept has been praised in numerous clinical studies - whatever your preference, there is an Aura to suit your needs.

King Vision® aBlade

Visually performative blades offering improved maneuverability and continuous control.

- Advanced video laryngoscopy with integrated high-resolution camera.
- Auto-focus and auto-adjusting control HD view.

Parker Medical

- Polyurethane cuff material for greater comfort
- Soft silicone
- Non-latex
- Anti-fog technology
- Ideal for use in hard to intubate airways

VBM’s 3rd generation supraglottic devices also include esophagus-stretching cuffs that allow the passage of a large gastric tube insertion.

Ambu® AuraOnce™

- 3rd generation disposable laryngeal mask
- High quality ET tube portfolio designed and manufactured to the highest international standards.
- Range includes:
  - Soft silicone
  - Non-latex
  - Anti-fog technology
  - Ideal for use in hard to intubate airways
